
Flowchart: Find Kth Largest Element in a BST
Start
Input n
(number of elements)
Input n elements
and create BST
(using insert function)
Input K
Is K ≥ 1
and K ≤ n ?
No
Print
"Invalid value of K"
Yes
Set count = 0
and answer = -1
Call reverseInorder(root,
count, K, answer)
(Right → Root → Left)
Is answer != -1 ?
No
Print
"K is out of range"
Yes
Print
"Kth largest element is: "
answer
Stop
Reverse Inorder Traversal
(Right → Root → Left)
Function Call
reverseInorder(node,
count, K, answer)
Is node == NULL
or count == K ?
Yes
Return
No
Call reverseInorder
(node->right, count, K, answer)
Increment count
(count = count + 1)
Is count == K ?
Yes
answer = node->data
No
Call reverseInorder
(node->left, count, K, answer)
Return
